

Nea Odos is the Concession Company which has undertaken the study, design, construction, operation, exploitation and maintenance of the “Ionia Odos” Concession Project. This long-term project, with a total length of 380 km, includes the following main sections:

A) “Ionia Odos” motorway of an approximate length of 196 km. from Antirio to Ioannina (Egnatia Odos I/C). This motorway is of paramount importance, both at a social and a developmental level, since:

It connects Western Greece upgrading urban and rural centers such as Ioannina, Arta and Agrinio.

It adequately serves and connects the ports of Patra, Astakos, and Igoumenitsa.

It contributes to the wider development of the area by improving the access to major tourist and archaeological sites since, upon completing its construction, the trip from Antirio to Ioannina takes 1 hour and 40 minutes instead of 3 hours and 30 minutes.

This is a project that crosses two regions and four counties, thus meeting a long-existing demand and giving a new impetus for growth. Technical features of the project include among others: 24 bridges of a total length of 7 km., 4 tunnels of a total length of 11,2 km., 77 underpasses and 24 overpasses.

B) A.TH.E. motorway of an approximate length of 172,5 km from Metamorfossi I/C (area of Attiki Odos) to Skarfia, Prefecture of Fthiotida, after Kamena Vourola.

Important changes are scheduled and implemented in order for the A.TH.E. Motorway to become a modern and safe motorway. Our goal is to turn those 172,5 km from Metamorfossi to Skarfia into a model of reference for both Greek and international standards. Works already in progress, include road widening works, guardrail replacement, interchange reconstruction, upgrading of existing parking spaces and creation of new ones, upgrading of horizontal and vertical signage, etc.

A.TH.E. section crosses two regions and three counties and its technical features include among others: 8 bridges, 30 ICs and semi-I/Cs and 84 under & overpasses.

C) A.TH.E. connecting branch Schimatari – Chalkida of a total length of 11 km.

Kentriki Odos is the Concession Company which has undertaken the study, design, construction, operation, exploitation and maintenance of the “Aftokinitodromos Kentrikis Ellados – E65” Concession Project.

project, with a total length of 231 km, is of strategic importance for the development of the country and its purpose is to construct Aftokinitodromos Kentrikis Ellados (E65), from A.Th.E semi-I/C near Thermopiles I/C, to Egnatia I/C after Oksinia (total length of 174 km) and to manage and maintain A.Th.E section from Skarfia to Raches (total length of 57 km).

E65 motorway disposes the necessary capacity of a modern 2-lane motorway in each direction and crosses the plain of Fthiotida, the Othrys mountain, the Thessaly plain and Peneus river passing near the city of Karditsa, Trikala, Kalampaka to the foothills of Antichassia, Ion river and mountains of Chasia to be eventually connected with Egnatia Odos in the forest area of Pindos.

This is one of the most important national projects of particular strategic importance for the development of the country and the region, entirely constructed on new alignment and actually connects Eastern Greece to Western Greece.

The design is based on contemporary national and European standards, with respect to the natural and human environment, aiming at safety and ease of users and to ensure maximum time and fuel saving. Worth mentioning is that, upon completion of the construction works, the journey from Lamia to Egnatia will take 1 hour and 30 minutes instead of 2 hours and 30 minutes today.

Software Developer (Code: SDO720)

The successful candidate will be joining the Software Development & GIS team of the company, providing his/her services within the field of software development, supporting the management and configuration of company's software applications & systems in order to meet business objectives. The position is based at company's central offices in Nea Erithrea area.

Accountabilities:

- Participates in the design and development of existing and new software applications and systems that support company's needs.
- Tests, maintains and recommends software improvements to ensure strong functionality and optimization.
- Conducts thorough testing on software application to ensure business requirements and goals are met and end-user requirements are fulfilled.
- Manages and maintains company's customized backend software.
- Holds efficient relationships with all departments in the company to provide them with a adequate support in all software development issues and requests.
